## ***Radiology/Imaging Rotation Task Sheet***

### **OBJECTIVES**

### **OBSERVED/ASSISTED**

- |   |               |
|---|---------------|
| 1. Orientation to Diagnostics               | _____ / _____ |
| 2. Method of processing film                |               |
| a. developing/darkroom process              | _____ / _____ |
| b. identifying films                        | _____ / _____ |
| c. storing/filing/retrieval of films        | _____ / _____ |
| 3. Radiographic positioning                 |               |
| a. upper/lower extremities                  | _____ / _____ |
| b. chest/abdomen                            | _____ / _____ |
| c. vertebral column/skull                   | _____ / _____ |
| 4. Contrast studies                         |               |
| a. cholecystogram                           | _____ / _____ |
| b. intravenous pyelogram                    | _____ / _____ |
| c. upper/lower GI series                    | _____ / _____ |
| 5. Special Procedures                       |               |
| a. angiography                              | _____ / _____ |
| b. ultrasonography                          | _____ / _____ |
| c. mammography                              | _____ / _____ |
| d. computerized axial tomography            | _____ / _____ |
| e. magnetic resonance imaging               | _____ / _____ |
| 5. Radiation safety and protection          |               |
| a. lead aprons                              | _____ / _____ |
| b. radiation monitoring (badges/dosimeters) | _____ / _____ |
| 6. Transporting patients                    | _____ / _____ |
